1. INTRODUCTION

1.1 Project Overview

Category: Cloud App Development

Team ID: PNT2022TMID36566

Skills Required:

IBM Cloud, HTML, CSS, Javascript , IBM Cloud Object Storage, Python-Flask, Kubernetes, Docker, IBM DB2, IBM Container Registry

Project Description:

Income and Expense Tracker will maintain data of daily, weekly, monthly, yearly expenses, Manages your expenses and earnings in a simple and intuitive way. The web application “Personal Expense Tracker” is developed to manage the daily expenses in a more efficient and manageable way. By using this application we can reduce the manual calculations of the daily expenses and keep track of the expenditure

This application will ask users to add their expenses and based on that their expenses wallet balance will be updated which will be visible to the user. Also, users can get an analysis of their expenditure in graphical forms. They have an option to set a limit for the amount to be used for that particular month if the limit is exceeded the user will be notified with an email alert.

1.2 Purpose

In this project we propose a web application known as “Personal Expense Tracker” which is helpful to manage out income and expense as a daily or periodically or else whenever we want to remind. It also acts as an indicator or reminder example in the fastest world which we can't able to remember what are the things we have to do for the end of month and what are the payments we have to pay for the particular month. Due to some conflict or some other stress we forget some times that what are the income or where the money has to come from or what the payments we have to pay. This application will help you to make a note for what or the things we have to do for the end of month. For example, like how much it expenses for monthly and what are the expenses for a month. Some of the expense features like food expenses billing expenses like phone, electricity, taxation and some other personal expense. In this fast-moving world this web application will be very useful for a people who was a family and especially for a business people. Budgeting is an integral part of the society. Budget Tracking involves recording and analyzing the incomes and expenses of a person or an organization over a particular period of time. Today, since we are living in a hurry up and get it done society, many people are looking forward to efficient ways to budget their time and

money. During the recent years, some research has been carried out on household budget. It has been noted that in most cases, budget management is being done mentally and never being put on paper which makes Budget Tracking very difficult.

2. LITERATURE SURVEY

2.1 Existing problem

In a study conducted by Forrester in 2016 surveying small and medium businesses (SMBs) across the world, 56% companies reported expense management as being the biggest challenge for their finance departments. In another survey conducted by Level Research in 2018 in North America, respondents reported the following pain points in expense management before adopting automation:

- Manual entry and routing of expense reports (62%)
- Lack of visibility into spend data (42%)
- Inability to enforce travel policies (29%)
- Lost expense reports (24%)
- Lengthy expense approval system and reimbursement cycles (23%)

2.2 References

S.NO	TITLE	AUTHOR	YEAR	ABOUT
1	D2D Expense tracker application	Anjali Kumara, Utkarsh Raj	2021	D2D App aims to assist everybody WHO square measure progressing to understand their expenses and save from it. Here user will outline their own classes for expense sort like food, clothing, rent and bills wherever they need to enter the cash that has been spent and can also add some info in further info to specify the expense.
2	Expense tracker	Atiya Kazi, Praphulla.S	2020	This project is an android app which is used to track the daily expenses of the user. It is like digital record keeping which keeps the records of expenses done by a user. The application keeps the track of the Income and Expenses both of user on a day-to-day basis.

3	Expenditure management system	Dr.V.Geetha, G. Nikhitha	2022	In this project a weekly, monthly, and yearly basis, details of expenses will be displayed in the form of a pie chart. It aids us in remembering and adding information about what money we receive from others and what costs or payments we must make on a given date or month.
4	Expense Tracker	Miriam Thomas, Lekshmi.P,Dr.T.Mahalekshmi	2020	By using this application we can reduce the manual calculations of the daily expenses and keep track of the expenditure. In this application, user can provide his income to calculate his total expenses per day and these results will be stored for each user.
5	Tracking Expenses by Commodity at Widget Farmers Cooperative	Ramasamy	2004	Widget Farmers Coop (WFC) is a large retail agricultural supply cooperative with 12 locations in two states. It has over 40 million dollars in annual sales each year since its creation in 2004. WFC management would like to track expenses and identify areas of the business that are profitable and capitalize on them, as well as identify areas that are not profitable and realign or eliminate them.

2.3 Problem Statement Definition

PROBLEM STATEMENT:

Many organizations have their own system to record their income and expenses, which they feel is the main key point of their business progress. It is good habit for a person to record daily expenses and earning but due to unawareness and lack of proper applications to suit their privacy, lacking decision making capacity people are using traditional note keeping methods to do so. Due to lack of a complete tracking system, there is a 2 constant overload to rely on the daily entry of the expenditure and total estimation till the end of the month.

Who does the problem affect?	People getting regular wages.
What is the issue?	The paper based expense tracker system does not provide the user portability , existing system only used on paper based records so unable to update anywhere expenses done and unable to update the location of the expense details disruptive that the proposed system.
When does the issue occurs?	When the digits could not be recognized correctly. When the transactions are not successful. When the elder people unable to understand the smaller handwritten digits. When the paper based expense tracker records are subjected to fire accident, flood, etc.
Where is the issue occurring?	The issue occurs when the person is unable to track his income and expenditure.
Why is it important that we fix the problem ?	By solving this issue those people getting regular wages can track their expenses and avoid unwanted expenses.

3. IDEATION & PROPOSED SOLUTION

3.1 Empathy Map

3.2 Idea on & Brainstorming

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

10 minutes to prepare
1 hour to collaborate
2-8 people recommended

2

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

10 minutes

A Team gathering
Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

B Set the goal
Think about the problem you'll be focusing on solving in the brainstorming session.

C Learn how to use the facilitation tools
Use the Facilitation Superpowers to run a happy and productive session.

1

Personal Expense Tracker Application

Tracking the expense is one of the most important issues in daily life. The challenging task is to remember each and every transaction and make analysis for future expenses.

5 minutes

PROBLEM
How might we?

How much we can reduce space consumption
How might we provide alert
How might we categorise expenses
How might we easily compare and analyse the data

Key rules of brainstorming
To run a smooth and productive session

- Stay in topic.
- Defer judgment.
- Go for volume.
- Encourage wild ideas.
- Listen to others.
- If possible, be visual.

Step-2: Brainstorm, Idea listening and Grouping

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

10 minutes

TP
You can select a sticky note and hit the pencil icon to start drawing!

Akashkumar R

- Multiple bank/balance management
- Automatic logging of transaction
- User account authentication
- budgeting tools, credit monitoring
- Functionality of the App
- money tracking
- receipt keeping
- Data Security
- advice to grow your net worth

Mahesh R

- Managing transaction receipts and records
- Expenses and revenue tracking
- Paying taxes in time
- Processing payments and invoices
- Features to incorporate in expense tracking app
- Deduct insurance and retirement costs
- Review adjust your budget whenever necessary
- Allocate funds to short term goals
- Take essential care of expenses

Dheena K

- Overspending
- Underspending
- To remind the user to enter the spendings
- Budget report
- Notifications and alerts
- User can invest in funds, stocks
- Financial guide and support
- Basic finance tips can be given to users
- User could learn and use advantages in bankings

Santhosh R

- anytime & anywhere access
- controlling expenses through awareness
- least scope of data loss
- getting bills approved in real time
- Benefits of expense tracking app
- Calculate your income
- track your spending
- set realistic goals
- review your budget

3

Group Ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

TP
Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mind.

DO's

- Follow a Budget
- Invest for the long term
- Have an emergency fund
- Protect yourself
- Review an Monitor

DONT's

- Have a longer loan than is needed
- Under estimate interest
- Take on high interest credit
- spend more than you earn
- Overlook your benefits

Tools

graph LR; Tools --> Python; Python --> Flask; Flask --> IBM_DB2[IBM DB2]; IBM_DB2 --> Docker; Docker --> IBM_Cloud[IBM Cloud]; Docker --> Kubernetes; IBM_Cloud --> Kubernetes;
```

Step-3: Idea Prioritization

3.3 Proposed Solution

S.NO.	Parameter	Description
1.	Problem Statement	In paper-based expense tracker system it is difficult to track our monthly expenses manually. In paper-based expense tracker system it is difficult to track our monthly expenses manually. The paper-based expense records may get lost in case of fire accidents, flood etc.
2.	Scalability of the Solution	This application can handle large number of users and data with high performance and security. This application can adapt for both large-scale and small-scale purposes. Easily available in all kinds of devices.
3.	Idea / Solution description	Daily expense management system which is specially designed for non-salaried and salaried personnel for keeping track of their daily expenditure with easy and effective way through computerized system which tends to eliminate manual paper works. Personal finance applications will ask users to add their expenses and based on their expenses wallet balance will be updated which will be visible to the user. They have an option to set a limit for the amount to be used for that particular month if the limit is exceeded the user will be notified with an email alert.
4.	Novelty / Uniqueness	The user gets notified when their expense exceeds the limit and also it reminds the user when they forgot to make entry. Tracking expenses through SMS. Data analytics on expenses. Future expense prediction

5.	Social Impact / Customer Satisfaction	The application should be able to generate reports of their spending and notify users if they have exceeded their budget. It is designed to be dynamic to produce the prediction. It also provides users' personal information, their income as well as their expenses. This application can create awareness among common people about finance and stuffs. This application also helps user to be financially responsible. It Reduces time rather than entering details manually.
6.	BusinessModel (Revenue Model)	This Application is provided for free of cost. But It will have some advertisement. In premium version there is no advertisement and contains some additional features.

3.4 Problem Solution fit

<p>Define CS, RL into CL</p> <p>Focus on PR, map into RC, understand RC</p> <p>Identify strong TR & EM</p>	1. CUSTOMER SEGMENT(S) CS People who are struggling to track their expenses are our customers. They can use our app to maintain records about their income and expenses	6. CUSTOMER LIMITATIONS CL <small>RC, BUDGET, DEVICES</small> User have to entry every record manually. The category divided may be blunder or messy. person who is handling system must have some technical knowledge.	5. AVAILABLE SOLUTIONS AS <small>PLUSES & MINUSES</small> User can add their income and expenses. They have an option to set a limit for the amount to be used for that particular month if the limit is exceeded the user will be notified with an email alert.	<p>Explores AS, differentiate</p>
	2. PROBLEMS / PAINS PR <small>+ ITS FREQUENCY</small> In paper-based expense tracker system it is difficult to track our monthly expenses manually. The paper-based expense records may get lost in case of fire accidents, flood etc.	9. PROBLEM ROOT / CAUSE RC When the digits could not be recognized correctly. When the transactions are not successful. When the elder people unable to understand the smaller handwritten digits. When the paper based expense tracker records are subjected to fire accident, flood, etc.	7. BEHAVIOR BE <small>+ ITS INTENSITY</small> The user have to entry all the expenses manually. Sometimes user forgot to note their expenses. So it makes difficult to calculate the expenses that he spent.	<p>Focus on PR, map into RC, understand RC</p>
	3. TRIGGERS TO ACT TR This application can create awareness among common people about their income and expenses. It Reduces time rather than entering details manually.	10. YOUR SOLUTION SL The application should be able to generate reports of their spending and notify users if they have exceeded their budget. This application can create awareness among common people about finance and stuffs. This application also helps user to be financially responsible.	8. CHANNELS of BEHAVIOR CH The user gets notified when their expense exceeds the limit and also have an option to set remainder for adding their expenses. Tracking expenses through SMS. Data analytics on expenses. Future expense prediction	<p>Extract online & offline CH of RC</p>
	4. EMOTIONS EM <small>BEFORE / AFTER</small> Frustration, Confusion, Inadequate > Boost, Feeling smart, Be an example for others			

4. REQUIREMENT ANALYSIS

4.1 Functional requirement

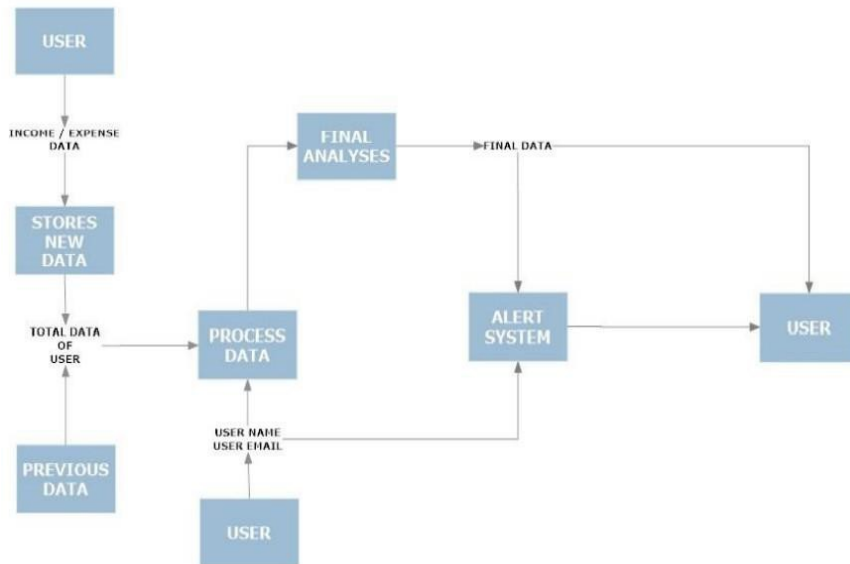

FR No.	Functional Requirement (Epic)	Sub Requirement(Story / Sub- Task)
FR- 1	User Registration	Form for collecting details
FR- 2	Login	Enter username and password
FR- 3	Calendar	Personal expense tracker application must allow user to add the data to their expenses.
FR- 4	Expense Tracker	This application should graphically represent the expense in the form of report.
FR- 5	Report generation	Graphical representation of report must be generated.
FR- 6	Category	This application shall allow users to add categories of their expenses.

4.2 Non-Functional requirements

FR No.	NonFunctional Requirement	Description
NFR- 1	Usability	Helps to keep an accurate record of your income and expenses.
NFR- 2	Security	Budget tracking apps are considered very safe from those who commit cyber crimes.
NFR- 3	Reliability	Each data record is stored on a well built efficient database schema. There is no risk of data loss.
NFR- 4	Performance	The types of expense are categories along with an option. Throughput of the system is increased due to light weight database support.
NFR- 5	Availability	The application must have a 100% up-time.
NFR- 6	Scalability	The ability to appropriately handle increasing demands.

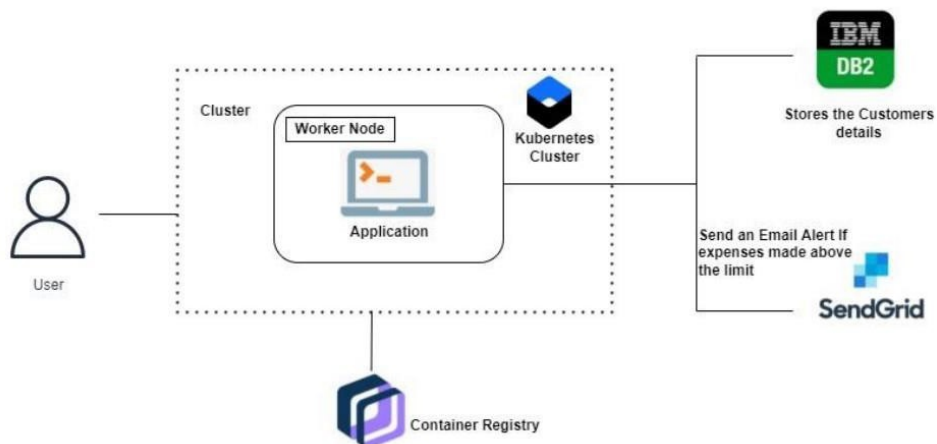

5. PROJECT DESIGN

5.1 Data Flow Diagrams

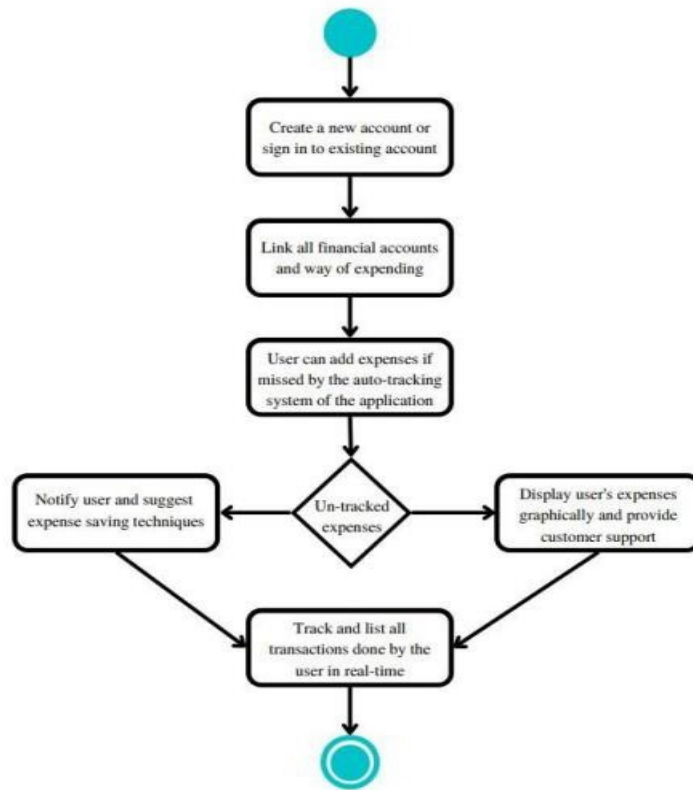

5.2 Solution & Technical Architecture

Technical Architecture:

Solution Architecture

5.3 User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority
Customer (Mobile user & web user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High
		USN- 3	As a user, I can register for the application through Facebook	I can register & access the Dashboard with Facebook Login	Low
	Login	USN - 4	As a user, I can log into the application by entering email & password	I can access the application	High
	Dashboard	USN - 5	As a user I can enter my income and expenditure details.	I can view my daily expenses	High
Customer Care Executive		USN – 6	As a customer care executive I can solve the log in issues and other issues of the application.	I can provide support or solution at any time 24*7	Medium
Administrator	Application	USN - 7	As a administrator I can upgrade or update the application.	I can fix the bug which arises for the customers and users of the application	Medium

6.PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	8	High	DHEENA , MAHESH R
Sprint-1	Login	USN-2	As a user, I can log into the application by entering email & password	8	High	AKASHKUMAR, SANTHOSH
Sprint-2	Add Expense	USN-3	As a user, I can add the day-to- day expense to the application	5	Medium	DHEENA , MAHESH R
Sprint-2	Edit and Delete Expense	USN-4	As a user, I can edit and delete the previously created expense	5	Medium	AKASHKUMAR, Pannar
Sprint-3	Creating time based filters in history.	USN-5	As a user, I can see the time based history of expenses.	8	High	DHEENA , MAHESH R
Sprint-3	Integrating with pie-charts for analysis	USN-6	As a user, I can view diagrammatic representation of expenses	5	Medium	AKASHKUMAR, SANTHOSH
Sprint-4	Enabling limit feature	USN-7	As a user, I can set monthly limit to expenses	5	Medium	DHEENA , MAHESH R
Sprint-4	Sending Email Alerts	USN-8	As a user, I will receive a mail if I cross a limit	8	High	AKASHKUMAR, SANTHOSH

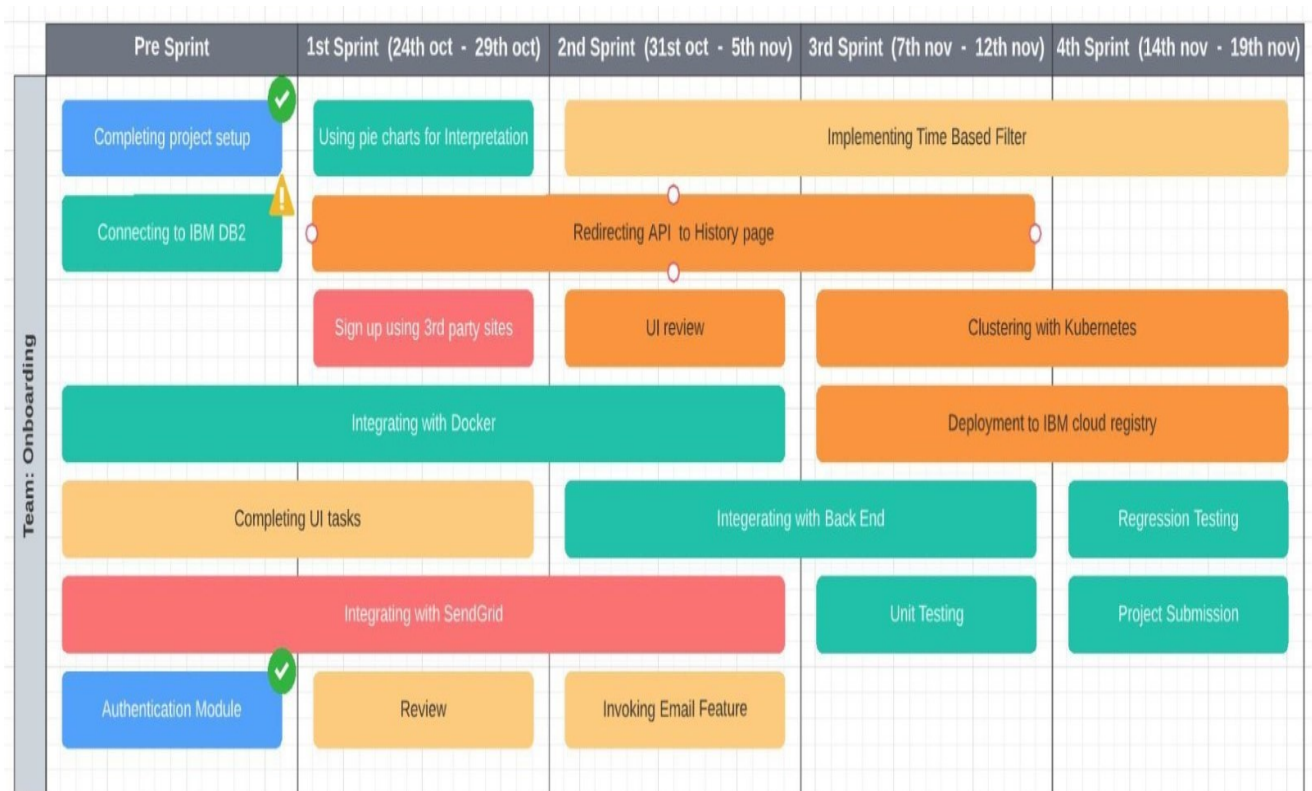

6.2 Sprint Delivery Schedule

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	23 Oct 2022	28 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	30 Oct 2022	04 Nov 2022	20	05 Nov 2022
Sprint-3	20	6 Days	06 Nov 2022	11 Nov 2022	20	12 Nov 2022
Sprint-4	20	6 Days	13 Nov 2022	18 Nov 2022	20	19 Nov 2022

Velocity

We have a 6-day sprint duration, and the velocity of the team is 20 (points per sprint).
Calculating the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \text{sprint duration} / \text{velocity} = 20/6 = 3.33$$

Burn down Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down chart s can be applied to any project containing measurable progress over time.

Sprint duration

7 . CODING & SOLUTIONING (Explain the features added in the project along with code)

7.1 FEATURE 1

We have added the data visualization methods for expenditure. The pie chart have been used to represent the monthly expenses. The pie chart is a pictorial representation of data that makes it possible to visualize the relationships between the parts and the whole of a variable. For example, it is possible to understand the industry count or percentage of a variable level from the division by areas or sectors. The recommended use for pie charts is two-dimensional, as three-dimensional use can be confusing.

The dimensions form sectors of the measurement values; they can have one or two sizes and up to two measures. The first dimension is used to define the angle of each sector that makes up the chart and the second dimension optionally determines the radius of each sector. Additionally, these plots are useful for comparing data over a fixed period since they do not show changes over time. Therefore, their use should be considered if:

- You are looking to categorize and compare a set of data.
- You only have positive values.
- You have less than seven categories since a larger number can make it difficult to perceive each segment.

7.2 FEATURE 2

Email notifications will be sent to the users once they cross the expenditure limit through send grid mail system. Most notifications are transactional, meaning a recipient's action or account activity triggers them. But some notifications are marketing related, encouraging the recipient to take a specific action. Ecommerce product notifications inform recipients about new products or discounts. Plus, unlike general marketing emails, these are highly personalized and focus on a single product. For example, if a customer views an item on your website and that item goes on sale, you can send the customer a notification to let them know this is the best time

to buy. Users can also opt into receiving notifications when an out-of- stock item is back in stock.

Notification emails tend to perform well because the content is highly relevant to the recipient. But the only way for the recipient to know this is if you state the content clearly in the subject line.

For example, the subject line "New Sign-in to Your Account" gets straight to the point, letting the user know why you sent this notification.

Sendemail.py

```
import smtplib
import sendgrid as sg
import os
SUBJECT = "Expense Tracker"
s = smtplib.SMTP('smtp.gmail.com', 587)
def sendmail(TEXT,email):
    s = smtplib.SMTP('smtp.gmail.com', 587)
    s.starttls()
    s.login("akashkumar992002@gmail.com", "*****")
    message = 'Subject: {}\n\n{}'.format(SUBJECT, TEXT)
    s.sendmail("akashkumar992002@gmail.com", email, message)
    s.quit()
```

7.3 Database Schema

Tables

REGISTER

id INT NOT NULL GENERATED ALWAYS AS IDENTITY,
username VARCHAR(255) NOT NULL,
email VARCHAR(255) NOT NULL,
password VARCHAR(255) NOT NULL

EXPENSES

id INT NOT NULL GENERATED ALWAYS AS IDENTITY,
userid INT NOT NULL,date TIMESTAMP NOT NULL,
expensename VARCHAR(255) NOT NULL,
amount INT NOT NULL,
paymode VARCHAR(255) NOT NULL,
category VARCHAR(255) NOT NULL

LIMITS

id INT NOT NULL GENERATED ALWAYS AS IDENTITY,
userid VARCHAR(255) NOT NULL,
limitss VARCHAR(255) NOT NULL

8.TESTING

1. TEST CASES

TEST CASE ID	PURPOSE	TEST CASES	RESULT
TC1	Authentication	Password with length less than 4 characters	Password cannot be less than 4 characters
TC2	Authentication	User name with length less than 2 characters	User name cannot be less than 2 characters
TC3	Authentication	Valid user name with minimum 2 characters	User name accepted
TC4	Authentication	User name left blank	User name cannot be less than 2 characters
TC5	Authentication	Password field left blank	Password cannot be empty
TC6	Authentication	Minimum 4 characters valid password	Password accepted
TC7	Authentication	Password and Confirm Password did not match	Please enter same password
TC8	Authentication	Confirm Password field left blank	Please enter same password

8.2 USER ACCEPTANCE TESTING

Technical Requirement Document (TSD)	
Test Case ID	Test Case Description
TC_001	Verify if user is able to order single product.
TC_002	Verify if user is able to order multiple products.
TC_003	Verify if user can apply single or multiple filters
TC_004	Verify if user can apply different sort by
TC_005	Verify if user is able to pay by Master Card
TC_006	Verify if user is able to pay by Debit Card
TC_007	Verify if user is able to pay fully by reward points
TC_008	Verify if user is able to pay partially by reward points

9.RESULTS

1. Performance Metrics

- Tracking income and expenses: Monitoring the income and tracking all expenditures (through bank accounts, mobile wallets, and credit & debit cards).
- Transaction Receipts: Capture and organize your payment receipts to keep track of your expenditure.
- Organizing Taxes: Import your documents to the expense tracking app, and it will streamline your income and expenses under the appropriate tax categories.
- Payments & Invoices: Accept and pay from credit cards, debit cards, net banking, mobile wallets, and bank transfers, and track the status of your invoices and bills in the mobile app itself. Also, the tracking app sends reminders for payments and automatically matches the payments with invoices.
- Reports: The expense tracking app generates and sends reports to give a detailed insight about profits, losses, budgets, income, balance sheets, etc.,
- E-commerce integration: Integrate your expense tracking app with your eCommerce store and track your sales through payments received via multiple payment methods.
- Vendors and Contractors: Manage and track all the payments to the vendors and contractors added to the mobile app.
- Access control: Increase your team productivity by providing access control to particular users through custom permissions.
- Track Projects: Determine project profitability by tracking labor costs, payroll, expenses, etc., of your ongoing project.
- Inventory tracking: An expense tracking app can do it all. Right from tracking products or the cost of goods, sending alert notifications when the product is running out of stock or the product is not selling, to purchase orders.
- In-depth insights and analytics: Provides in-built tools to generate reports with easy-to-understand visuals and graphics to gain insights about the performance of your business.
- Recurrent Expenses: Rely on your budgeting app to track, streamline, and automate all the recurrent expenses and remind you on a timely basis.

10.Advantages And Disadvantages

Advantages:

1. Improved visibility:

Most expense management software includes a dashboard that compiles employee expense data and presents it in an easy-to-understand visual format using charts and other graphics.

2. Security:

All the Data's are stored in ibm cloud and db2 so all the data are maintained safely.

3. Month wise Comparison:

Using the Expense Manager, you can easily make month on month comparisons of earning, expenses and spending in a more organized manner.

4. Alert Mail:

User Receives the alert mail when they exceed the expense limit.

5. Automation:

All the calculations are automated. Graph are generated based on the expense made.

6. User Friendly:

Expenses can be added easily.

Disadvantage:

1. Requires Internet Connection:

This web application requires an active internet connection to access.

2. Cost:

Using cloud service need some investments. Every time we can't access the cloud freely.

11.Conclusion

From this project, we are able to manage and keep tracking the daily expenses as well as income. While making this project, we gained a lot of experience of working as a team. We discovered various predicted and unpredicted problems and we enjoyed alot solving them as a team. We adopted things like video tutorials, text tutorials, internet and learning materials to make our project complete.

12.FUTURE SCOPE

1. User can able to upload the receipt of their expenses made.
2. Application will make suggestion to reduce unnecessary expense.
3. User get remainder in email to add their daily expense.
4. User can able to link bank accounts with our application
